

| Process Questions (logic model input, activities, outputs) | Outcome Questions (logic model short-, intermediate, long-term outcomes) |
|---|---|
| <ul style="list-style-type: none"> • What intervention components were adopted, implemented, or enforced fully, partially, or not at all? Why? • Were participants satisfied with the intervention components? Which ones? Why? • Was there variation in implementation across subpopulations? Which subpopulations? • What were assets or facilitators of intervention delivery? How can assets or facilitators be harnessed? • What were barriers or challenges to intervention delivery? How can barriers be overcome? • Who engaged, dropped out, or did not engage? Why? | <ul style="list-style-type: none"> • Did pedestrian safety training significantly improve knowledge and skills among participants (e.g., law enforcement officers, traffic engineers, city planners)? • Did outreach to city council members (e.g., data on pedestrian fatalities, citizens’ testimonies on walkability) significantly influence their support of local ordinances and regulations to improve pedestrian safety? • Did the Safe Routes to School education campaign significantly increase awareness of safe walking routes among students and safe driving practices among parents? • Did traffic calming devices significantly reduce traffic speeds? • Did the worksite “distracted driving” campaign significantly increase safe driving behaviors among employees? • Did the pedestrian safety initiative significantly reduce pedestrian injuries and fatalities? |
